

Talbott's

Manufacturers of Biomass & Waste to Energy Systems

HOWARTH TIMBER, Scunthorpe have installed a Talbott T500 500,000 BTU/150kW Hot Air System which has been operating for 20 years.

The capital outlay for the unit in 1982 was £5,000 and Howarth's Timber's waste disposal and heating costs were then approximately the same, achieving a one year payback period on the unit.

They have achieved in the last 20 years a typical investment return of £100,000.

Phil Smith of Howarth Timber commented; 'We have gained from free heat and wood waste disposal with the installation of a Talbott T500 unit for 20 years and probably many more years to come. Talbotts have provided a reliable and efficient service ensuring the continued 'trouble free' operation of the system. What a Fantastic Investment!'

Talbotts are the UK's leading manufacturers of hand fired hot air systems.

All Talbott units are approved appliances under the Clean Air Act for use in smokeless zones.

The Talbott T Range of units are ideal for the combustion of wood off cuts for factory space heating.
